

One-Button Simplicity To Endless Possibilities

Advanced Technology. Yes. Complicated. No.

ClearView+ has been designed with many exciting features, none more impressive than its one-button control system that allows you to:

- Increase or decrease magnification with a simple turn of the knob.
- Change from photo mode to black and white—as well as reverse—to best suit your vision and the task at hand.

The unit also features:

Always-In-Focus™ Technology

Ensures objects are always in crisp, clear focus even while they're being moved or if you change the magnification.

Two Separate Light Sources

Located to the left and right of the camera, they eliminate glare and shadowing, provide true color, and automatically adjust for surrounding light, providing ideal illumination of objects on the ClearView+ platform, day or night.

Which ClearView+ System Is Right For You? You Tell Us.

Build the Desktop Video Magnifier system that meets your lifestyle and visual needs. It's as simple as:

- 1) Choose the system**
 - CCTV stand-alone unit

ClearView+ Desktop Video Magnifier

Vision Loss. A Challenge No More.

Does vision loss keep you from activities you love like reading, crossword puzzles, or looking at pictures? Are you coping with a condition such as Macular Degeneration, Glaucoma, Diabetic Retinopathy or Retinitis Pigmentosa, and finding it harder and harder to see through the lens of your hand-held magnifier? Well now there's a solution that combines all the advanced technological features you need with the ease-of-use and comfortable operation you want.

Optelec's ClearView+ Desktop Video Magnifier system magnifies anything under the viewfinder from 2 to over 50 times its original size, always maintaining perfect focus. It also features a specially designed monitor and lighting design for optimum visual enhancement. Best of all, the entire unit can be controlled with a single button, and can be customized to your exact needs.

Standard Features. Exceptional Benefits.

On top of its Always-In-Focus technology and state-of-the-art lighting system (found only on ClearView systems), the ClearView+ also includes:

Specialized Monitors

ClearView+ displays are specially selected and tuned for maximum sharpness, brightness, and contrast—this is no off-the-shelf TV or computer monitor. Each is selected and tested by vision loss specialists to provide the best possible image, and every display can be tilted and positioned for maximum viewing comfort no matter what the user's height.

Easy-Glide Platform

ClearView+ allows you to quickly and easily scan every inch of the object you're viewing on its Easy-Glide Platform that moves left and right, forward and back. If you want the table held steady, simply push the electronic brake—a second push releases it.

Memorized Viewing Settings

As an added benefit, when the unit is turned off, ClearView+ remembers your last viewing settings and will start in the same modes—perfect

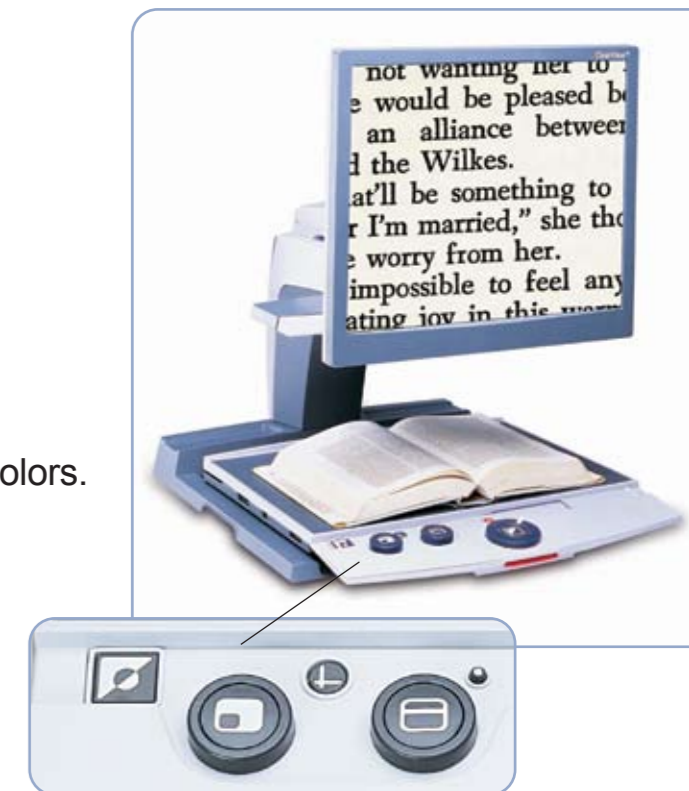

if you're performing the same type of task repeatedly, like reading the daily paper.

What's The "Plus"?

Should you require advanced capabilities, the ClearView+ can be customized to include:

- Line markers and windows providing reference guidelines for reading.
- Additional foreground and background colors.
- Picture-in-Picture (PIP) functionality for desktop computer integration allowing you to view the magnified image on your computer screen.
- A Position Indicator that shines an LED dot on the object you are viewing to show where the camera is pointed, helping you locate your place on the page.

These options can be added at any point, allowing you to adapt your ClearView+ as your needs change.

Product Highlights
